RCNP EXPERIMENT E181

PROPOSAL FOR EXPERIMENT AT RCNP

14 Jan. 2002

TITLE : Observation of $(p, 2p)$ Reactions on Light Nuclei

SPOKESPERSONS : NORO, Tetsuo Professor
Dept. of Phys., Kyushu University
6-10-1 Hakozaki, Higashi, Fukuoka 812-8581
Phone: 092-642-2544, Fax: 642-2553
E-mail: noro@nucl.phys.kyushu-u.ac.jp

NAKAMURA, Masanobu Lecturer
Dept. of Phys., Kyoto University
Phone: 075-753-3853, Fax: 753-3887
E-mail: nakamura@nh.scphys.kyoto-u.ac.jp

EXPERIMENTAL GROUP :

Sagara, K	Kyusyu U.	AP	Ishida, K	Kyushu U.	M2
Nozoe, S.	Kyushu U.	M1			
Hatanaka, K.	RCNP	P	Sakemi, Y.	RCNP	AP
Wakasa, T.	RCNP	RA	Yoshimura, M.	RCNP	Research Fellow
Yoshida, H. P.	RCNP	JSPS Fellow	Kamiya, J.	RCNP	D2
Shimizu, Y.	RCNP	M2	Fujita, K.	RCNP	M1
Sakamoto, N.	RCNP	M1			
Sakaguchi, H.	Kyoto U.	AP	Takeda, H.	Kyoto U.	D3
Yasuda, Y.	Kyoto U.	D1	Terashima, S.	Kyoto U.	M1

RUNNING TIME :	Test running time and calibration runs	2.0 days
	Data runs	5.5 days
BEAM LINE :	WS course (Grand Raiden + LAS)	
BEAM REQUIREMENTS :	Type of particle	Polarized proton
	Beam energy	392 MeV
	Beam intensity	300 nA
BUDGET :	Experimental expenses	7.3 M Yen

TITLE : Observation of $(p, 2p)$ Reactions on Light Nuclei

SPOKESPERSON : NORO, Tetsuo and NAKAMURA, Masanobu

SUMMARY OF THE PROPOSAL

It is proposed to measure differential cross sections and analyzing powers for $(p, 2p)$ reactions on nuclei from deuteron to *p*-shell or light *sd*-shell nuclei. One of the purposes of this measurement is to study the A_y reduction problem observed in this reaction corresponds to $s_{1/2}$-knockout. ¿From the proposed systematic measurement using light nuclei, it is expected to see whether the reduction of the analyzing powers of these reactions scales to the nuclear density or to the deviation from the on-shell condition caused by finite Q-values of the reactions. Helium-4 target, which central density is unusually high but the separation energy of one nucleon does not stand out from those of $1s_{1/2}$ nucleon in neighboring nuclei, will play an important role in this systematic study. Another purpose is to examine the reliability of IA analysis, where the recoil effect is neglected or only perturbedly treated, for such light target nuclei. For this purpose, measurement with various kinematical condition is planned for a few target.
