

# Mini-workshop Oct 23/Nov 27

## Neutrino nuclear responses for DBDs and astro neutrinos

**NEWS**

Neutrinos Electro-Weak interactions and Symmetries

Organizers: Ejiri H, Shima T and Tamii A, RCNP  
Correspondence [shima@rcnp.osaka-u.ac.jp](mailto:shima@rcnp.osaka-u.ac.jp)

Properties of neutrinos beyond SM are studied by double beta decays (DBDs). Neutrino nuclear responses (nuclear matrix element NME) are crucial for extracting neutrino properties. The workshop aims at active discussions on recent theoretical and experimental studies of the neutrino nuclear responses for DBDs and astro neutrinos.

Part I Oct 23, 2 -5 pm JST. Session chair Shima T  
Ejiri H, RCNP Experimental approaches to DBD NMEs  
Fukuyama T, RCNP Comments: Neutrino mass hierarchy  
and right-handed weak currents in DBD  
Iwata Y, Kansai DBD NMEs by interacting shell model  
Zuber K, Dresden Neutrino nuclear interactions and  
forbidden single-beta decays for DBDs

Part II Nov. 27, 3 -5 pm JST. Session chair Tamii A  
Terasaki J, CVUT Reliability of QRPA approach to DBD NME  
Zinatulina D, JINR Muon capture reactions at PSI for DBD  
neutrino nuclear responses  
Hashim I, UTM OMC for DBD NMEs and astro-neutrinos  
- The RCNP/UTM/JINR joint project-
