

Technical support for use of the muon beam at TRIUMF

This program aims to support researchers to start up new muon experiments at TRIUMF using the DC muon beam and to become experts in the muon science in the future RCNP-MuSIC muon facility.

The MuSIC muon division provides various supports for experiment, data analysis, financial, and related paperwork for international shipping for the proposed experiments.

A financial support is assumed for one person in an experimental group: flight between Japan and Vancouver, local transportation and accommodation at TRIUMF. One or more experts from the RCNP accompany the users to TRIUMF for experimental supports.

If you would like to submit a proposal for this support program, please be sure to submit a proposal for the TRIUMF Molecular and Materials Science Experiments Evaluation Committee (MMS-EEC). The MMS-EEC usually takes place twice a year. Please check the instruction and deadline in the TRIUMF home page.
