

Introduction

We hold world advanced facilities here in Research Center for Nuclear Physics, Osaka University, playing a role of the core of nuclear physics research under the world wide collaborations.

Research is a challenge. We need fresh minds to explore new concept. To form new concept, we need careful observations and studies of the nature. In RCNP, with tight communications among accelerator, experiment and theory groups, people are trying to approach and uncover the principle of the nature.

Challenges are sometimes followed by failures. However, by careful preparation and arrangements, they can be minimized. We can also learn something new from them. In RCNP, we pay special attention to the safety matter to support the enjoyable research. In this booklet, our safety support system is explained. We encourage all of you to read it. If you have questions or comments, please do not hesitate to report them to us. We are happy to talk with you which further makes the facility of RCNP more attractive. Try to help each other to perform good researches. In doing so, it is important to pay special attention so that an accident will not happen.

The effort of your challenge with attention to your safe environments will make your work place more comfortable and efficient, from which your fruitful output will be brought. The integration of the individual efforts will make RCNP the core research place in the world.

Enjoy your research !

Hiroshi Toki
Director of Research Center for Nuclear Physics
