# Effective Field Theory and its Application to Astrophysics

Martin J. Savage[a]

[a] *Department of Physics, University of Washington, Seattle, WA 98915*

I will present an overview of the current status of the application of effective field theory (EFT) to nuclear physics. Emphasis will be placed on recent results on light-quark mass dependence of the two-nucleon sector. Further, I will discuss the impact of EFT on calculations of astrophysical interest.
